Representation of Numbers

• **Nodes** to embody a group of numbers.

Representation of Numbers

- **Nodes** to embody a group of numbers.
- Points in a metric space.

• Properties from the shape of an object.

Algebraic Topology \Rightarrow Simplicial Homology

• Properties from the shape of an object.

Algebraic Topology \Rightarrow Simplicial Homology

• Clusters and Cycles

• Properties from the shape of an object.

Algebraic Topology \Rightarrow Simplicial Homology

• Clusters and Cycles

• Properties from the shape of an object.

Algebraic Topology \Rightarrow Simplicial Homology

Clusters and Cycles ____

Examples of cycles are holes and voids.

Focus of our study. –

Relationship Between Two Points

• Connect any two points ϵ units apart.

Relationship Between Two Points

• Connect any two points ϵ units apart.

• The resulting structure is a simplicial complex $S(\epsilon)$.

Generalization of graphs -

Features in Simplicial Complexes

• Simplices

Features in Simplicial Complexes

• Simplices

• Cycles

Life and Death Situation

• Living Cycles

Life and Death Situation

• Living Cycles

Sequence of Simplicial Complexes

Persistence of Cycles

• Ordered Pairs

Persistence of Cycles

• Ordered Pairs

• Barcode

Quantifying Importance of a Cycle

• More persistent cycles are more important.

Quantifying Importance of a Cycle

• More persistent cycles are more important.

Centrality Measures in Graph Theory

- Degree Centrality
- Betweenness Centrality
- Loop Centrality

Importance based on the number of walks passing the loop.

Merging Homological Cycles

• Two cycles merge if their sum is a sum of dead cycles of the same dimension.

Merging Homological Cycles

• Two cycles merge if their sum is a sum of dead cycles of the same dimension.

Proposed Centrality Measures

Centrality of a Cycle

Proposed Centrality Measures

Centrality of a Cycle

• Persistence of Merging Cycles

$$a\left[\epsilon-b(\sigma)
ight]+\sum_{arsigma\in M[\sigma,\epsilon]}cP(arsigma)$$

Proposed Centrality Measures

Centrality of a Cycle

• Persistence of Merging Cycles

$$a[\epsilon - b(\sigma)] + \sum_{\varsigma \in \mathcal{M}[\sigma,\epsilon]} c \mathcal{P}(\varsigma)$$

Application of Measures

Representation of Measures

Expectation Meets Reality

More Than Meets the Eye

What does the Plot Say?

Better Late Than Never

Does Size Matter?

• Consistent with other topological summaries

Conclusion

- Consistent with other topological summaries
 - Captures other properties

Conclusion

- Consistent with other topological summaries
 - Captures other properties
- Merging makes a difference.

Thank You!
